- Hands-on experience with server-side responsibilities such as version control and updates, API modifications, database operations, and backend environment configurations.
- Jira, Trello, Git, GitHub, Agile methodologies, Scrum framework

PROFESSIONAL EXPERIENCE

Software Engineer Intern | Epit Global GmbH |

June 2024 – Present

Full-stack development using Laravel and Vue.js · Fixed issues in server-side web apps · Collaborated with stakeholders to improve product features and resolve bugs

EDUCATION

BSc (Hons) in Information Technology

October 2022 - Present

Sri Lanka Institute of Information Technology (SLIIT)

- Specialising in Data Science

Certificate in Professional Skills

2022

Aquinas College of Higher Studies

PROJECTS

Business Management System

MongoDB · Express.js · React.js · Node.js

Developed a full-stack business management system with modern UI and complete CRUD functionalities for users, inventory, and sales.

Laravel + Vue CRUD Application

Laravel · Vue.js · MySQL

Built a responsive CRUD system for managing users and records. Focused on backend logic, form validation, and real-time UI updates using Vue components.

Anime Recommendation Web App

Python · Flask · Content-Based Filtering

Created an anime recommendation platform using Flask and Python, delivering personalized suggestions based on tags, ratings, and purchase history.

DWBI Data Pipeline Project

ETL · Data Warehousing · Excel · Power BI

Built an end-to-end data pipeline for analysis and reporting. Extracted and transformed data using ETL techniques, stored in a warehouse, and visualized insights through Power BI dashboards.
